the T-TRAC™

HDNWKURJK
in Tire &
Trunnion

The T-Trac™
Alignment can save
your operations
tens of thousands
of dollars in
premature
trunnion and
tire wear. Helps
avoid emergency
shutdowns for
trunnion and
thrust roller
interference.

● ● ● ● HOW IT WORKS

Equipment rotating on an inclined support develops a downhill axial thrust from the weight of the unit and product. Most rotating equipment is designed such that this axial thrust needs to be offset by force developed from skewing the trunnion rollers in a precise manner. The T-Trac™ establishes a properly skewed trunnion roller setting to thrust the equipment in the uphill direction.
